IR REMOTE CONTROL

WIRELESS INSTANT CONTROL FOR INDOOR APPLICATION

The TELETASK infrared remote control features a compact and minimalist design. From your chair, sofa or bed, you can control everything with it: lights, curtains, sunshades, sockets,... even faster than with a smartphone. No need to switch on, log in, select,... Just press a button and you're done!

Because each AURUS control panel has an infrared receiver, you can use this remote control in all of these rooms.

The black TDS12503 remote control has 8 keys and is discreetly present in the rooms where you desire it. The eight basic keys "1" to "8" control the primary functions of the room you are currently in. These are the same functions as those on the corresponding control panel on your wall. Additionally, when you press the remote control 'master' button, the eight keys "1" to "8" switch to eight 'Master' functions, which are the same throughout the entire home. Even if you only have an AURUS-1

with one key, this remote control allows you to control up to 16 functions.

What do you see as a user of all this?

Actually, nothing. The infrared sensors are invisibly embedded in each AURUS touch panel. You can simply aim the remote control at it and manage the desired functions.

BENEFITS OF IR REMOTE CONTROL

The advantage of infrared as a medium is that infrared signals are quick and harmless, and do not pass through walls and doors (which is the case with HF signals). This means the remote control automatically adjusts according to the functions in the room you are in.

When you do not want certain functions (buttons) on your control panels to be operated via the remote control, the installer can easily block these. It is also possible to

TELETASK

8 buttons for the control of functions

Master button to control 8 master functions

do the reverse. This is particularly useful in (semi-) public spaces or when you want to prevent small children from unintentionally activating certain functions. A subset of the functions on the control panel can then be blocked but are still operable via the remote control. Permanently or for a certain period (growing children?).

IMPORTANT REMARK

For safety reasons, the ability to operate door openers, gates, a pool cover, and similar devices via IR remote control must always be disabled in rooms with windows. Your installer can set this up for you.

TECHNICAL

Suitable for indoor use only. (For outdoor use, opt for the ATMOS app).

Range: > 10 metres, suitable for areas up to 200m²; depending on the placement of the IR receiver(s) and sunlight conditions.

Modulation frequency: standard 38kHz

DIMENSIONS AND WEIGHT

Size: 35 x 135 x 11 mm (H)

Weight: 15 grams

BATTERY

A standard Lithium CR2032 battery is included in the package.

ORDER REFERENCE

TDS12503: Mini IR remote control (colour: black).
