AURUS-2
TDS12020XX

AURUS-2, the smallest member of the AURUS family, is a massive glass touch panel with capacitive touch technology.

It will improve your interior design to an exclusive level and is especially designed to use in rooms and areas where one or two buttons are sufficient.
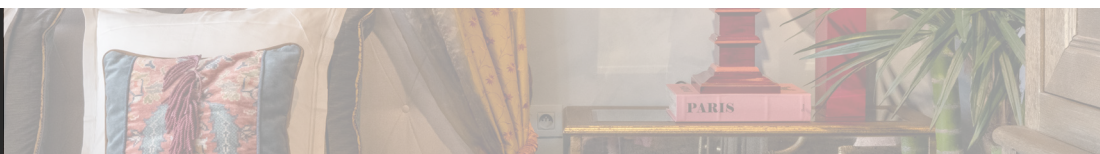

This panel has two buttons and is available in a glossy white, black, silver-grey or shining golden glass design. It will be love at first sight for you and your guests. This capacitive technology panel is divided in two large sensitive areas with LED's. During the night the two feedback lights are soft illuminated for easy location of the buttons in the dark. This panel can be used to control your lights, curtains, drapes, shutters, sun blinds, doors, gates, heating, cooling and even your music. If two buttons are too limited, you can extend them thanks to the extra possibilities. Each of the two buttons can be configured with a short and long push control. A short push

can activate/deactivate a light circuit; a long push on the same button can dim the light circuit. You can also extend the AURUS-2 by using a TELETASK remote control on which all IR functions are available. You have 16 buttons available via the remote control

AURUS-2 also has a built-in sensor for room temperature control. Both heating and cooling are supported. The also built-in buzzer will give you the acoustic feedback for every chosen function.

*WHAT IS CAPACITIVE TOUCH TECHNOLOGY?

TELETASK introduces the newest capacitive touch technology in the AURUS-2. At the back of the glass front plate, there are two imaginary buttons. These buttons are made out of antennas which sense the approach of a human finger, which activate its predefined function.

TECHNICAL

About any standard single wall box can be used for both brick- and plasterboard walls. The AURUS-2 is provided to be mounted in these wall boxes with two screws.

If two buttons are not enough for your application or if you want a panel with display, please check the AURUS-4, AURUS-6 or AURUS-OLED with OLED display and 4*8 buttons. These have a bigger size but have the same installation features (same wall box), so you can easily change the product types on the wall in a matter of seconds. If you like to go one step further; you can also chose for the PENTUS or OPUS touch screens on which you can control all the home automation functions of your project.

DIMENSIONS

90 W x 90 H (glass plate) x 13 D (mm)

CONNECTIONS

AUTOBUS: with dedicated AUTOBUS connection set (included with the device).

MAINTENANCE

Use only dry microfiber cloth.
