trendsetter in domotics

## AURUS-4 S / AURUS-4 XL

*The beauty of simplicity*

***AURUS-4 S/XL, the TELETASK massive glass touch panel, will improve your interior design to an exclusive level. This panel is especially designed to use where multiple Home Automation buttons are needed at one location in a minimalistic architecture. This four button beauty is available in a glossy white, black, aluminium-grey or shining golden glass design. It will be love at first sight for you and your guests. You can choose between the compact square AURUS-4 S model or the larger rectangular AURUS-4 XL model.***

This capacitive technology\* panel is divided into four large sensitive areas with LED's. During the night the four feedback LED's are softly illuminated, for easy location of your buttons in the dark. This panel can be used to control your lights, curtains, drapes, shutters, sun blinds, doors, gates, heating/cooling and even your music. If four buttons are too limited you can extend them by

using a TELETASK remote control. The mini remote control has 16 functions and the large remote control has extra functions for heating/cooling, audio and multi-colour control on top.

AURUS-4 has a built-in sensor for room temperature control. Both heating and cooling are supported. While seated in your sofa or lying in your bed, a buzzer will give you the acoustic feedback for every chosen function.

As a bonus the AURUS-4 XL can be plugged into his wall bracket in a vertical or horizontal position, the choice is up to you. No more disturbing wrongly positioned touch panels, just install them as you like.

**\*What is capacitive touch technology?**

TELETASK introduces the newest capacitive touch technology. At the back of the glass front plate, there are two imaginary buttons. These buttons are made out of antennas which sense

Figure: AURUS-4 XL and S in all possible colours

the touch of a human finger, which than activate its predefined function.

## Technical

About any standard single wall box can be used for both brick- and plasterboard walls. The AURUS is provided to be mounted in these wall boxes with two screws or claws.

If four buttons are not enough for your application or you want a panel with a display, please check the other AURUS panels. These have other integration features but have the same installation bracket (for the same wall box), so you can easily change the panels on the wall in a matter of seconds. If you like to go one step further; you can also go for the AURUS-TFT. This is a 4.3" capacitive touch screen with full colour display, on which you can control all home automation functions of your project, see graphs, energy consumption/generation information, etc... Or go for the large size touch screens of the MAIOR family with 10", 15" or 19" displays.

## Dimensions:

Total thickness on the wall:

4S: 90W x 90H (glass plate) x 13 (mm)

4XL: 90W x 140H (glass plate) x 13 (mm)

## Connections:

AUTOBUS: with dedicated connection set (included with the device).

## Maintenance:

Use only dry microfiber cloth.
