MAIOR 10”, 15”, AND 19”

LUXURY COLOUR TOUCHSCREEN WITH HOME AUTOMATION, CAMERA, AND DOORPHONE FUNCTIONS

The TELETASK MAIOR touchscreens are both large and compact. MAIOR offers the perfect solution as a compact touch screen, but with all the capabilities normally found only on heavy-duty PC systems. MAIOR supports the full GUI+ graphical user interface of TELETASK, which is included for free. Thanks to this GUI+, all home automation functions are available, including hands-free digital doorphone. The modern aluminum-black design of these TELETASK MAIOR touchscreens guarantees good visual integration in the most diverse interiors.

The “looks” of your MAIOR user interface are based on the virtually unlimited possibilities of the GUI+. Selecting a room or floor or any other possible combination requires just one click. You have full control over the control of your lighting, heating, cooling, ventilation, doors, gates, curtains, sunscreens, audio/video systems, cameras, multi-room multi-source (streaming) audio systems, etc. All this in a fully customizable graphical environment. You can choose to work with customized floor plans with symbols for each possible function or manage your functions on a different type of background: a photo of your garden, your room, showroom, etc. Or perhaps you prefer a technical display with rows and columns of functions, symbols, cameras, etc.

YOU DECIDE, MAIOR AND GUI+ MAKE IT HAPPEN

You can place your favorite functions on your favorites page. When someone rings the gate or front door, the MAIOR can immediately jump to your pre-set favorites page where you can not only view the camera of the intercom but also all other camera images with a wide or aerial view. GUI+ offers you unlimited security thanks to full control of your cameras.

Conclusion: MAIOR is the central management tool for all more extensive installations.
