AURUS-4 TEMP

TOUCH PANEL WITH MINI OLED DISPLAY FOR
TEMPERATURE READOUT TDS12026XX

The AURUS-4 TEMP is a solid glass capacitive-sense touch panel from the TELETASK "AURUS" family. It has a discrete OLED display to visualize the room temperature in which it is located. It provides your interior with an exclusive minimalistic look. It is compact and designed for rooms where you need temperature control and limited other functions like light and curtain control. Perfect at the entrance of a children bedroom or guest room.*

The touch panel is provided with four buttons with LED feedback and is available in several AURUS glossy ceramic colours. Depending on the colour you select, combined with your interior, the exclusive design will positively surprise your guests. Or it may almost disappear on the wall. The choice is yours.

The feedback LEDs give the necessary button feedback, while they also provide night lighting to find the four buttons in complete darkness. The lower two buttons

are pre-defined for temperature control while the upper two buttons can be configured for any other functionality. You can use them to control lights, curtains, shades, doors, gates or even for audio functions. The lower two buttons can also control the zone on/off and fan speed settings as needed to control the room HVAC settings.

If you need some extended functions, your system integrator can also configure the two upper buttons with 'short' and 'long' press functionalities. Clicking short may be the control of a light, while clicking longer may control a curtain or group of curtains or anything else you need.

You can extend the functions also by using the TELETASK remote control. Therefore, like all AURUS- family touch panels, the AURUS-4 TEMP has a built-in IR receiver. The remote control provides up to sixteen remote control functions, although the panel itself has only four.

TELETASK

The built-in temperature sensor is used to measure and manage the room temperature. No extra thermostat needed anymore. AURUS-TEMP all and more capabilities on board.

The built-in buzzer gives you the 'click' feedback when clicking a button. It can also be used for event feedback like a front doorbell or other attention related events.

***WHAT IS CAPACITIVE TOUCH TECHNOLOGY?**

TELETASK introduces the latest capacitive touch technology in the AURUS-4 TEMP. At the back of the glass front plate, there are four software defined touch sensitive buttons. These buttons are "antennas" which sense the approach of a human finger, and thus activate the predefined function.

TECHNICAL

Mounting: About any standard single wall box can be used for both brick- and plasterboard walls.

If four buttons are not enough for your application or if you want a panel with a larger display, please check the AURUS-OLED panel. This panel has more integration features for the same installation mechanics. So you can easily change the panels on the wall in a matter of seconds. If you want to go even larger, check the full colour OPUS 7" and MAIOR 10", 15" and 19" touch screens.

DIMENSIONS

Total thickness on the wall:
90 W x 90 H (glass plate) x 13 D (mm)

CONNECTIONS

AUTOBUS data connection for a robust bi-directional high speed communication between all devices.

MAINTENANCE

Use only dry microfiber cloth.
